## Continuation of Box No. III of continuation of first sheet (2)

The lubricant containing perfluorinated polyether for forming a lubrication layer to be provided on a magnetic disk surface, which is a matter common to the inventions as claimed in claim 1, the inventions as claimed in claim 2 and the inventions as claimed in claims 11-13 is publicly known as described in the following references A-D and falls within the category of prior art. Consequently, the matter does not correspond to special technical features prescribed in PCT Rule 13.2. Therefore, among these three invention groups, there is no technical relationship involving the same or corresponding special technical features.

The inventions of claims 3-10 and the inventions of claims 14-15 involve two or three of the above invention groups.

Therefore, this international application involves three invention groups not linked with each other so as to form a single general inventive concept.
